DETAILED ACTION

Drawings

1. The previously held objection to the drawings is withdrawn in light of the amendment filed on March 26, 2002.

Specification

2. The abstract of the disclosure is objected to because lines 8-11 refers to purported merits of the claimed invention and draws a comparison to the prior art. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 30 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kudoh in view of US patent No. 4,521,446 to Coleman, Jr. et al.

Kudoh teaches a field effect transistor comprising:

a semiconductor substrate (10);

two spaced apart titanium metal-semiconductor compound regions (15,16)

forming source/drain regions;

a first dielectric layer (98) on the source/drain regions; and

a conductive gate layer.

Kudoh does not teach a gate dielectric layer comprising reacted metal (TiO₂). Coleman, Jr. et al. teaches a gate dielectric layer comprising TiO₂. It would have been obvious to one of ordinary skill in the art to incorporate the TiO₂ layer taught by Coleman, Jr. et al. into the device taught by Kudoh, since it is desirable to increase yield in device fabrication (See Coleman, Jr. et al., Col.1, lines 25-35).

Response to Arguments

5. Applicant's arguments filed March 26, 2002 have been fully considered but they are not persuasive.

The applicant argues that Coleman, Jr. et al. does not teach a gate dielectric of local reacted metal. Coleman, Jr. et al. teaches a gate dielectric comprising TiO₂ (reacted titanium). This teaching can be found in lines 25-35 in Col. 1 of Coleman, Jr. et al. Particularly in lines 32-35, where Coleman, Jr. et al. states that the TiO₂ is used as an extra layer in MIS gate dielectrics. This passage points out that the TiO₂ (reacted metal) is part of the gate dielectric.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2811

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
